Capacity Development Activities by Country

Since its establishment, Petrad has facilitated more than 700 capacity development events in over 50 countries. More than 27 000 participants from over 100 frontier or experienced petroleum nations have learned and shared knowledge with the Norwegian experience as a starting point.

In general, participants represent petroleum authorities or national oil companies, where they hold positions in line for, or at a management level at the time of participation. Feedback has proved that the facilitated processes, the training events and the network have contributed to strengthen capacity development of the participants' institutions as well as individual competence enhancement.
